DETAILED ACTION

Prosecution Status

1. This office action NON-FINAL REJECTION since the Examiner has changed the art and advanced new arguments.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 13 is rejected under 35 U.S.C. 102(b) as being clearly anticipated by Tanaka (EP-1137054).

With respect to claim 13, Takaka discloses a lithographic projection apparatus comprising all basic features of the instant claim such as: an illumination system (IOP) for providing a beam of radiation used to irradiate a patterning device; a first support (RST) for supporting a patterning device (R), the patterning device capable of patterning the beam of radiation; a second support (WST) for supporting a substrate (W); a projection optical system (PL) for projecting a predetermined pattern formed on the patterning device onto the substrate; and a projection system positioning module (118) that controls at least one of a position and an orientation of the projection system during projection of the patterned beam of radiation onto the target portion of the substrate.

Allowable Subject Matter

4. Claims 1-12 and 14-15 have been found to be allowable since while the prior art of record teaches an exposure apparatus having a parallel link configured to support the projection system such that its attitude is controllable but does not specifically a lithographic projection apparatus and corresponding method where a projection system position module is provided to control at least one of a position and an orientation of the projection system based on at least one of a velocity and an acceleration of the projection system.

Prior Art Made of Record

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Akimoto, Satoshi (JP411087233A) discloses an exposure apparatus where accelerations sensors are fitted to a projection optical system for measuring the acceleration of the projection lens.
